

SaaS Checkout Page Essentials Checklist

Foundation and Strategy

- ☐ Define the primary checkout type needed: Web, iFrame, In-App, or In-Game.
- ☐ Confirm the checkout flow aligns with your business model (e.g., B2B vs. B2C).
- ☐ Map out the complete customer journey from the "Buy" button to the "Thank You" page.
- ☐ Identify the absolute minimum customer information required for a successful transaction.

Design and User Experience

- ☐ Remove all non-essential form fields to minimize user effort.
- ☐ Display a clear and comprehensive pricing breakdown: subtotal, taxes, and the final total.
- ☐ Ensure the primary Call-to-Action (CTA) button is highly visible through color and size.
- ☐ Maintain a clean, uncluttered page design that matches your company's branding.
- ☐ Verify the entire checkout page is fully responsive and flawless on mobile devices.
- ☐ Implement a visual progress indicator for any checkout process with more than one step.
- ☐ Enable a guest checkout option to reduce friction for new customers.
- ☐ Confirm browser autofill functionality works correctly for all relevant fields.

Trust and Security

- ☐ Verify the entire checkout process is secured with an SSL certificate (HTTPS).
- ☐ Prominently display security seals (e.g., PCI DSS, SOC 2) and trust badges.
- ☐ Provide clear and easily accessible links to your Privacy Policy and Terms of Service.
- ☐ Show logos of accepted payment methods to build familiarity and confidence.
- ☐ Clearly state your money-back guarantee or refund policy near the final price.
- ☐ Confirm your payment solution includes robust fraud prevention measures.

Global Readiness and Localization

- ☐ Automatically detect the user's location to display prices in their local currency.
- ☐ Translate the checkout page, including error messages, into the customer's local language.
- ☐ Offer region-specific payment methods relevant to your key international markets.
- ☐ Ensure all taxes and VAT are calculated and displayed accurately based on the customer's country.

Payment and Subscription Handling

- ☐ Provide clear error messages for failed payments with actionable solutions for the user.

- ☐ Enable self-service options for customers to easily update their own payment details.
- ☐ For subscriptions, clearly state the recurring amount and the billing frequency.
- ☐ Implement a dunning management process to handle failed recurring payments automatically.
- ☐ Offer one-click purchases for returning customers by securely tokenizing payment information.

Testing and Optimization

- ☐ Set up analytics to track the checkout funnel and identify specific drop-off points.
- ☐ Regularly perform A/B tests on key elements like the CTA text, page layout, and field count.
- ☐ Review customer support feedback for any recurring issues or complaints about the checkout process.
- ☐ Test the end-to-end checkout experience in multiple browsers and on different devices before launching.
